

Software Quality Assurance

iMedRIS™ Data Corporation develops an industry-leading product that integrates all clinical research-related data collection and management into an intuitive, configurable, web-based application. Our products are sold to universities and medical centers all over the world. iMedRIS is an engineering company looking to create a team of top quality assurance analysts to support our software engineers. If you are interested and meet the requirements listed below, please submit your resume for consideration.

Roles and responsibilities:

- The qualified candidate shall be responsible for regression testing of our web-based application, test case creation and maintenance, and other tasks related to the position.

Responsibilities include:

- Full, end-to-end regression cycle testing for every release cycle.
- Testing coverage improvement: The ability to develop new regression plans, test using existing regression plan, and enrich test plan as the application evolves
- Effective communication of issues to engineers to ensure resolution
- Creating testing solutions that can be reused effectively and efficiently
- Designing, building, and automating QA test scripts for regression, stress, and performance test suites
- Performing manual testing and track issues
- Communicating effectively with development team and management

Requirements:

- 2+ years of experience of software testing or equivalent work experience and technical training
- Highly detail oriented with a passion for quality
- Strong understanding of software development life-cycle (SDLC)
- Ability to multi-task in a fast paced environment
- Solid, demonstrated experience with cross-browser and multiple device testing.
- Experience with a database system in a regulated industry
- Knowledge of bug tracking application is a plus
- Knowledge of SQL is a plus
- Strong analytical and problem solving skills is a plus
- Preferred experience with automated testing (QTP/UFT, SoapUI, etc.)
